

# Smartmaster

A Simplify module by  Nexxtlab

Local & cloud control  
of your flexible  
energy assets

Easy to deploy

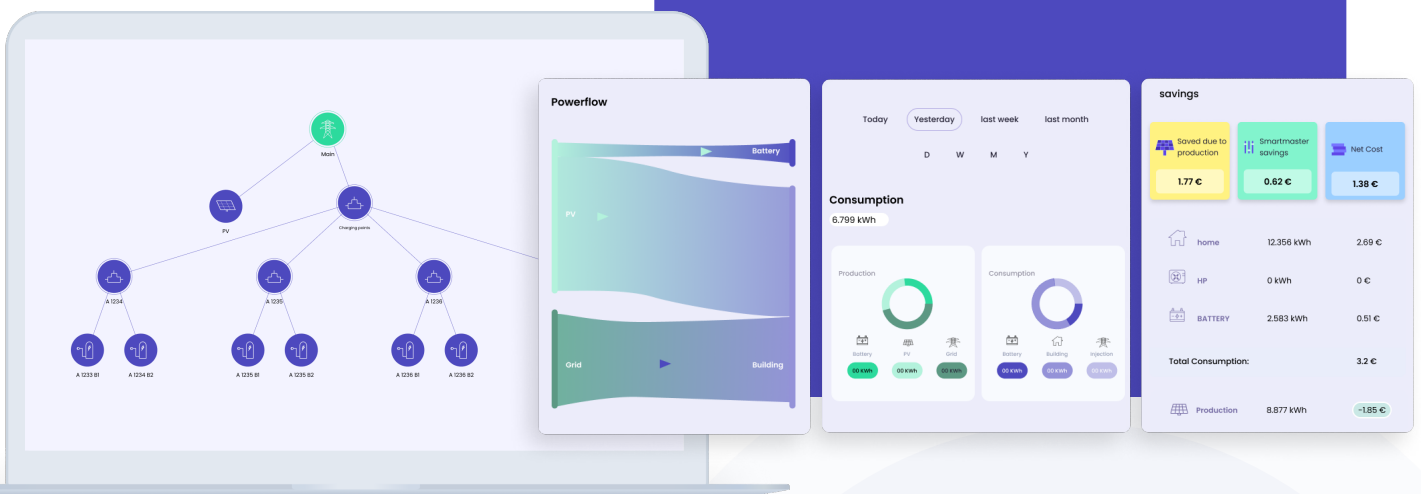

Flexible configuration

Remote dashboarding

# Smartmaster, when local control is required

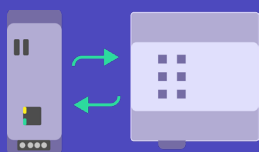

## Remote platform

- Technical and process monitoring
- Multi roles
- Fleet management
- Remote configuration with topology management

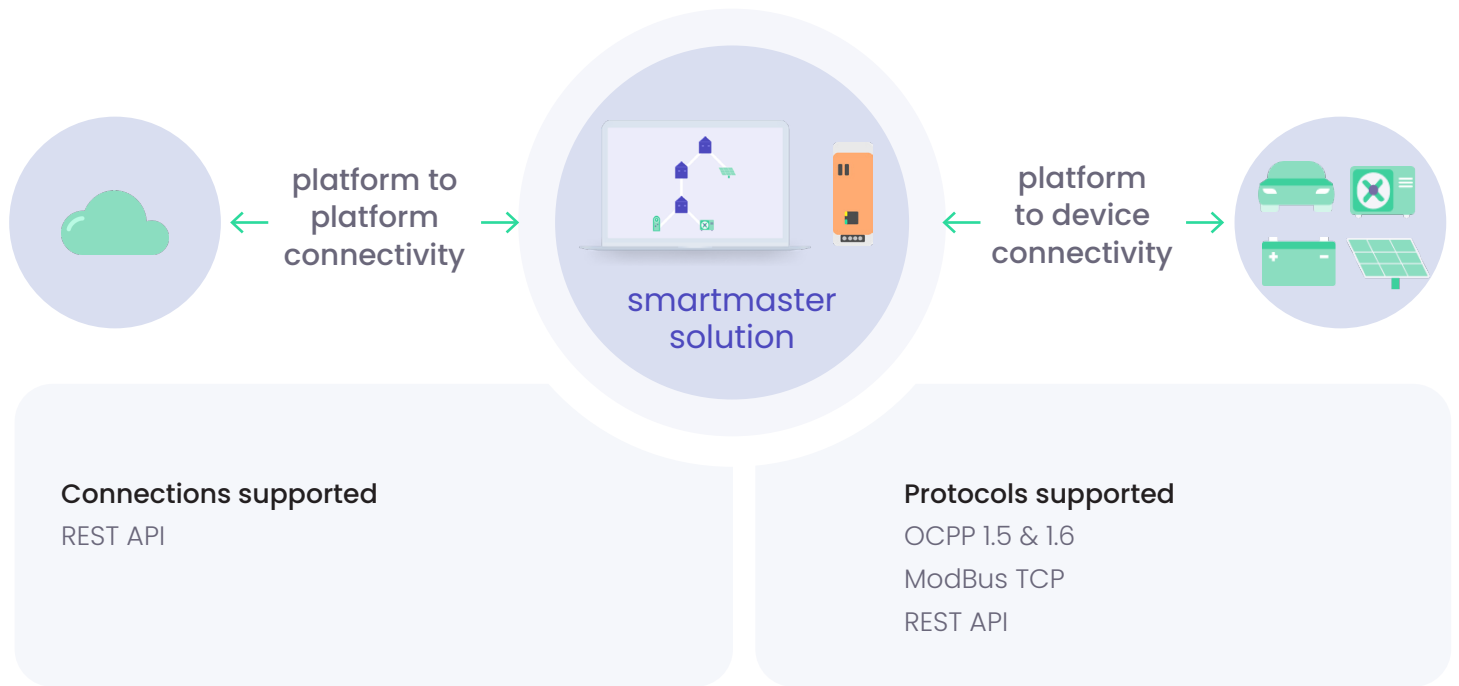

## Future proof local control

- Multi assets management
- Fit with all size of configuration
- Multiple optimizations strategy

Multiple device protocols  
and API inputs & outputs

## Easy technical configuration

1

VPN connection automatically set up by the device

2

Easy platform configuration based on templates of existing flexible energy (EV charging station, heat pumps,...)

3

Choose your control strategy type to optimize:

Self consumption     Dynamic tariffs     CO2 emission

*For technical information on the hardware device, please refer to the vendor documentation*

Smartmaster solution is part of Simplify,  
the most advanced software suite for near real-time interaction

### Smartmaster

When local control  
is required

### Smartbirds

Enabling multiple real-  
time interactions

### Smartprime

Start with dynamic tariffs

### Gridmap

Visualize more

### Gridscope

Simulate, plan, control

### Gridflex

Existing infrastructure,  
more power

### Smartcheck

Facilitate and document  
deployment of smart assets

Energy transition made simple

We are on a mission to simplify energy transition for the key enabler: **Grid operators, energy service suppliers and Flex assets constructors.**

We help you to activate new services for your low voltage users through modular solutions easy to deploy.
